Pisa, 23/11/2017

### M2Tech introduces the new Crosby stereo power amplifier

M2Tech is proud to introduce the Crosby stereo power amplifier. A new member of the Rockstars Series, the Crosby is the perfect companion for the Young MkIII DAC/preamplifier. The two units together make for a versatile and easy-to-use amplifier in a compact size and a nice-looking casing.

The Crosby is based on a class-D IcePower module delivering clean power on every load. The module's performance, already on a very high level, is taken to even higher levels by some mods applied by M2Tech, plus a input buffering circuit that allows every preamplifier to easily drive the Crosby at best.

The Crosby is provided with both single-ended and balanced inputs. The latter perfectly fit to the Young MkIII outputs. Speakers outputs use high quality, gold-plated posts which accept bare wire, spades, lugs or bananas. A trigger input on 3.5mm jack allows the Crosby to be operated by the Young MkIII or any other device provided with a trigger output.

The Crosby delivers 60W per channel on 8 Ohms before clipping. This power is enough to drive almost all modern mid- and high-sensitivity speakers in normal listening environments. When more power is necessary, however, two Crosby may be used in bridged mono mode, delivering each 180W on 8 Ohms.

The Crosby complies to the look of M2Tech Rockstars Series products.
