M2Tech introduces the new Van Der Graaf MkII low noise power supply

M2Tech is proud to introduce the Van Der Graaf MkII low noise power supply. Perfect companion to the newly introduced Young MkIII DAC/preamplifier, the Van Der Graaf MkII improves the sound of the DAC, thanks to the crystal clear supply current it delivers, which impacts positively on several areas: clock jitter reduction, signal-to-noise ratio improvement, etc.

The Van Der Graaf MkII also adds versatility to the Young MkIII-based system. In fact, it is able to remember the order the user followed while enabling the outputs, so that the same order is used in subsequent Van Der Graaf activations. This allow for eliminating unwanted “bumps” at power on and power off, at the same time using a single button to power the whole system on and off.

Thanks to its IR receiver, the Van Der Graaf MkII can “trap” the on/off IR command from the Young MkIII remote control, therefore activating/disabling its outputs without the need to operate the front panel buttons. Of course, the Young MkIII can be programmed to ignore the remote’s on/off commands and immediately power up when power is applied to it by the Van Der Graaf MkII.

The Van Der Graaf MkII is provided with four outputs: two single voltage outputs with 9V or 15V output and two three-voltage outputs to drive units like the old Marley headphones amplifier or future units in the new Rockstars Series.

The Van Der Graaf MkII also sets a new look for M2Tech Rockstars Series products.
